We've compiled this list after looking at dozens of reviews, top ratings, and best-of lists, along with the help of the community. This section covers everything you need to know about password managers, including what they are and how they work. We've also included some of the best password management software, in case you're looking for a specific option. What is a Password Manager? A password manager is a piece of software that keeps track of and manages your passwords. It's a secure way to store all of your login credentials in one place so you won't have to remember them all or lose them. Because password managers store your passwords in a database, they don't require you to re-enter the same information every time you need to log in. These password managers can also use a memorization system to make sure you can easily re-enter your passwords for websites you use frequently. The ability to use memorization can be quite powerful because it means you won't have to manually enter your password every time you log in. This can be a great benefit when you're using a public computer or something similar. The other nice thing about password managers is they don't need to access the Internet to manage your passwords. For example, LastPass can operate completely offline, saving your data and any changes you make without your network connection. Password Managers Save You Time Whether you're using a computer, mobile device, or desktop, it can be hard to remember passwords all of the time. This is especially true when you use a variety of websites and apps that use different login methods, or your login credentials are very important. But a password manager can help you avoid all of that. You can store your login information, use it to save you time when you're accessing important websites, or keep them secure from would-be hackers. The downside of password managers, though, is they can be a pain to use. They're usually quite complicated and the software you need to install and use can be tricky to set up. But if you're ready to spend a few minutes to save yourself a lot of time and effort, a password manager is for you. 82157476af
